Relaxx® with Engineered Stretch Yarn

NO SNARL
YARNS

SOFT HAND
FEEL

FOUR-WAY
STRETCH

RELAXX

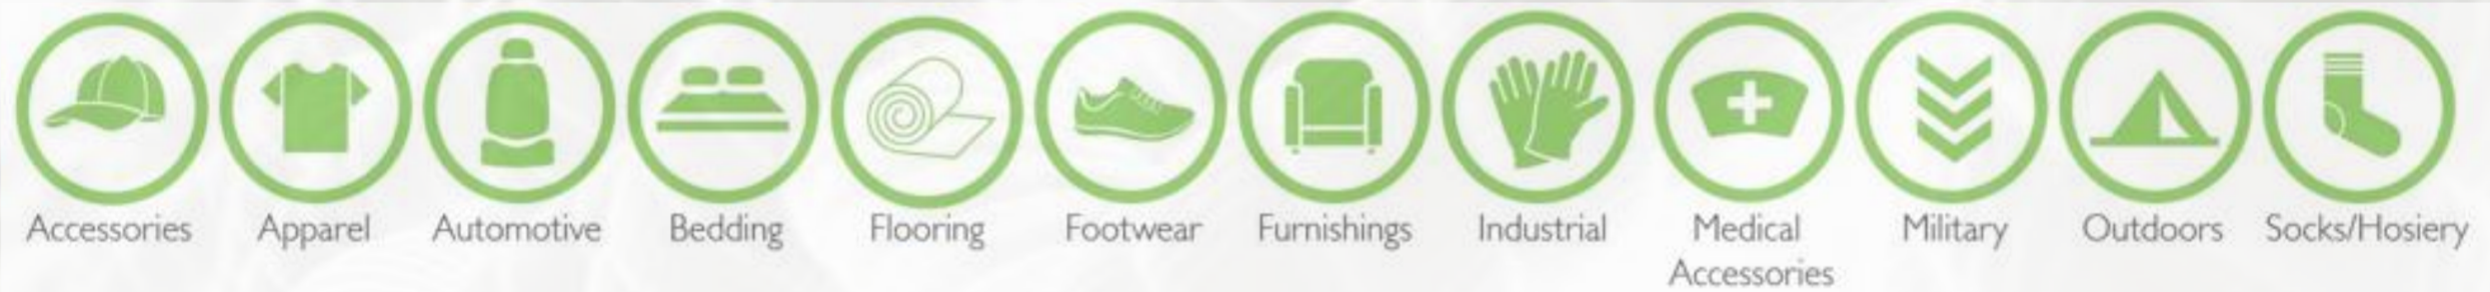

Benefits

- Relaxx® stretches as needed and bounces right back, because it's engineered that way—the stretch technology is part of the fiber.
- The action of covering a core yarn (elastane) with a covering yarn to increase its resistance and give it textile properties is known as the covering process which is the oldest and most common process.
- Relaxx® enables production of very thin and non-twisted yarns that are thus render stretchable and extremely durable fabrics.
- Relaxx® is engineered to create non-torque comfort – four-way stretch
- Made to stretch and recover, adding comfort and performance
- Provides exceptional stretch ranging from comfort to compression, depending upon its construction and fabric finishing
- Suitable for commercial laundering
- Quick drying and low shrinkage
- Combines well with other proprietary additives or finishes for additional benefits
- Technology is in the yarn structure. Fabric construction provides further performance.

Available Technologies

- Relaxx®: Full range of REPREEVE, RENU, PBT, 37,5 Technology, COOLMAX, THERMOLITE , NYLON 6, NYLON 66 and Spandex
- Relaxx® with Engineered stretch
- DTY denier range at 10 to 600 with covered elastomers from 20 to 600 denier
